A perforated soffit panel is available, however, depending on the soffit width or detail, this may not provide sufficient loftspace ventilation. Where ventilation of the roof void is required we would recommend the use of over fascia ventilators

N.B. May not be able to perforate 0.9/1.00mm sheets depending on sizing.

Standing Seam

The GutterClad Standing Seam System is generally used to finish off flat roofs, porches or other details requiring an eye-catching fascia detail. The components are manufactured from high grade pre-coated Polyester Powder Coated Aluminium or powder coated to a RAL colour of choice.
